

# Electrical Column Table

for SCAMAX® Documentscanner 6x1 and 3x1

This continuously adjustable scanner table is the space-efficient and ergonomic solution whenever your SCAMAX® production scanner cannot or should not be placed on your desk or in a dedicated scan station.

Depressions on the tabletop, in combination with a single lifting column designed for medical technology, enhance stability and allow for safe and effortless scanning even in tight spaces. The control for electric height adjustment is located at the bottom edge of the table.

In the SCAMAX® 6x1 version as a designated stand-alone device, the lifting column table forms the integrated scanner substructure. Control and height adjustment are carried out via the scanner's touch panel.

## Material

### Footplate

aluminium, colourless (gray), anodized

### Linak lifting column

aluminium, colourless (gray), anodized

### Tabletop

particle board with light gray coating

## Dimensions

**Width** 60 cm
