OECF Correction based on CET357

Incorrect OECF

Correct OECF

CET357 Project: As it Is.

A structured method for the objective capture of three dimensional objects.

Step 1. Calibrate the camera according to Metamorfoze Full or ISO 19264-1 Level A.

Step 2. Use the calibrated camera and its light source for the objective capture of three dimensional objects with one key light and CET357.

CET357 is used to control exposure, white balance, gain modulation and OECF according to Metamorfoze Full and ISO 19264-1 Level A.

The CET357 images are made with a Fujifilm GFX 100s camera and Zeutschel Omniscan software without post-processing.

With this methodology each three dimensional object can be captured as it is.
